ZAMAR is typically used in competitions, but its benefits can also be experienced in daily use. All riding disciplines can take advantage of this advanced method for the treatment of tendinous and muscular problems both before and after a competition as well as in daily treatment. Strongly recommended by vets.

The ZAMAR device has been tested and used by vet clinics with top-level experience, which work in direct contact with the national and international competitive environment. The results are highly satisfactory for immediate therapeutic response, simplicity of use and versatility of the unit.

Countless pathological conditions due to trauma or extreme work of the muscolar-skeletal apparatus can be found in every sport. The ZAMAR device has been tested in many ways and at significant times in all riding sports. Here below we supply a list of pathologies suffered by sports horses after particularly demanding competitions, which were treated with the ZAMAR machine:

- muscle/tendon contractures and injuries;
- inflammation and swelling due to stress and strain;
- pain and heaviness due to muscle strain;
- lactic acid stagnation;
- haematoma and extravasation due to contusion, trauma and tissue damage.

The results were excellent. Great appreciation has been expressed for the possibility of treating the injured/inflamed parts with personalised therapies: cold and heat treatment, alternated cold and hot cycles and massage.

Conventional treatments (ice packs or glycogel bags) do not ensure a steady temperature during the treatment. ZAMAR has developed a new method which represents a safe and definitive solution to the problem of cold/heat therapy.

Ludger Beerbaum has adopted the ZAMAR device...

- haematoma and extravasation due to contusion, trauma and tissue damage.

The results were excellent. Great appreciation has been expressed for the possibility of treating the injured/inflamed parts with personalised therapies: cold and heat treatment, alternated cold and hot cycles and massage.

A fundamental resource: steady temperature

Conventional treatments (ice packs or glycogel bags) do not ensure a steady temperature during the treatment. ZAMAR has developed a new method which represents a safe and definitive solution to the problem of cold/heat therapy.
A REVOLUTION IN TEMPERATURE TREATMENT

COUNTLESS ADVANTAGES NO CONTRA-INDICATIONS

- Continuous programmable temperature (cold and heat).
- Highly effective circulatory and muscle relaxant properties.
- Extremely easy to use both during competitions and in the stable.

- Avoids the administration of anti-inflammatory and other drugs with their undesired side effects.
- Safe and efficacious treatment, highly innovative compared to empirical methods (irrigation, ice or glyco-gels).
- Our technical department is at your disposal to design wraps suitable for special needs.
“STABLE” is a new product, developed on the basis of experience in the field, which offers:

- Increased refrigerating capacity
- Possibility of housing all accessories necessary for treatments
- Easy transport (on wheels)
- Strength (steel plate, treated and painted)
- Anti-dust filters to prevent obstructions in condenser

Specially adapted folding trolley, compact and easy to handling.

Above data refer to an outside temperature of +30 °C
